

# SOFTWARE ENGINEERING PROJECT

## (Dormitory Management System )

### **Group 13:**

**Bhanu Prakash Konatham**

**Farooq Syed**

**Rahul Keerthi Parameswara**

### **Description:**

The project is intended to help students to choose an accommodation, we called it the Dormitory Management System. The main part of it is an application with all available student dormitories in which the user can select a dormitory and receive information about it like rent, area, type of rooms, laundry, Heat and electricity bills, Rules and regulations.

### Problems faced:

1. We developed the code for only single user and password not for multiple users.
2. During the implementation of code, If we registered already but it is not showing in the search records.

### Steps to be Implemented:

1. Improvements for above problems
2. Fix bugs

### Optional features:

1. Administrative mode of application which is to add more dormitories and edit of content.
2. Implement some more additional(which are yet to be decided) which make the console easier to use and more user friendly.
